The stove man wants to pack his pieces of stove pipe in a square box. Can ou cut out the eight pieces and show him how to arrange them in a square? ANSWER TO CAT AND DOG PUZZLE.

In the cat and dog puzzle, she goes there and back, a distance of 162 feet, in 54 jumps, but as the dog goes 5 feet at a bound he has to make 17 leaps each way, which is the same as having to lose 8 feet. In other words, the dog must go 170 feet, while the cat goes 162 feet in even jumps. Dividing the cat's 54 jumps by 8 and multiplying by 5x5, shows that the dog would be beaten by one foot three inches.
